

## ABOUT TOSLINK CABLES

TOSLINK is a standardized optical fibre connection system. Toslink optical cable is a fibre optical cable that carries digital audio data in the form of light pulses, rather than using electricity. Using these light pulses has the advantage that you can eliminate some of the distortions caused by imperfections of inductance, capacitance and resistance in some copper based cables. An optical cable is virtually impervious to magnetic or electrical interference

### OTT15

Toslink to Toslink.

code	length	ms.p.	sales unit
OTT15/0.7	0.7	20	BL
OTT 15/1.5	1,5 m	20	BL
